CULTURE.—Sow in August in drills $\frac{1}{4}$ in. deep, 6 in. apart, keep down weeds. Just before winter cover thinly with straw or leaves.

LARGE GREEN CABBAGING,—A small, hardy, salad, used also as a substitute for lettuce, 5c. pkt., 10c. oz., 25c. $\frac{1}{4}$ lb., 75c. lb.

CORN—(Sweet or Sugar)

CULTURE.—Plant in hills 3 ft. apart each way, and five or six kernels in a hill. Hoe often, drawing soil up to stem after first hoeing. Break off side shoots. Make ground very rich. If stable manure is used, it is perhaps best to plow it under. Use broadcast or in the hill Mapes or Quinnipiac Fertilizer, worked well into soil. It has been found very beneficial to sow these fertilizers between the rows before cultivating and hoeing the second time.

We have been very careful in selecting the best and sweetest varieties of corn adapted to this section. The list below is arranged in order as they would mature. If two or more varieties are selected and planted at same time, they would be ready for the table at different times, one following the other.

MUSHROOM BED

MUSHROOM SPAWN

CULTURE.—Mushrooms are more easily cultivated than many people imagine and may be grown in any room or cellar where the temperature can be maintained at from 50 to 65 degrees. For the beds use a mixture of three parts horse droppings and one part good fresh loam. Before being placed in the bed, let the manure be put in some dry place to sweeten, mixing it thoroughly and turning it three or four times, when the loam may be added.

Upon a dry firm bottom or shelf, make the bed by spreading a thin layer of the prepared mixture, pounding it firm, and continue this, till the bed is twelve inches thick. Leave it thus for about a week, or until the temperature has subsided to 85 degrees. Then make holes about ten inches apart, and put in each a piece of spawn about the size of an egg. Press the spawn firmly into the compost about two inches, leaving the top uncovered to allow the excess of heat and moisture to pass off without injury to the germs. After ten days, fill the holes and cover the whole bed with two inches of fresh loam, and over this place a few inches of straw. If the temperature is right, mushrooms will appear in six or eight weeks from the time of spawning. The bed will continue bearing from four to six weeks. If the surface of the bed becomes dry at anytime, it should be moistened freely with water at a temperature of eighty to eighty-five degrees.

Our stock of spawn is replaced a number of times during the season and is giving excellent results.

PEAS

CULTURE.—For Peas, light, dry soil is best. Sow as early as ground can be worked, and again every ten days for succession. Peas may be sown as late as August 15th. Medium and late Peas must be planted early. Early Peas may be planted early or late, and the extra early very late. Sow in single or double rows from 4 to 6 feet apart, according to variety, and about an inch apart in the row and 4 in. deep. Hoe often, keep ground clean and fine. Most Dwarf Peas will bear better if bushed enough to keep them from the ground. If the pea louse attacks the vines, spray every day with clear water using force. Another remedy is whale oil soap. Dissolve one pound in 7 to 10 gallons water, and apply with sprinkling pot or syringe.

POTATOES

CULTURE.—So many conflicting opinions exist as to the best method of growing potatoes, that we do not venture to give directions for culture. We do however make the following suggestions: Plant in such a manner that most of the heavy hard work can be done by the horse. Use "Mapes Potato Manure," or "Quinnipiac Potato or Market Garden," in sufficient quantities to insure a crop. Always bear in mind that to get the full benefit of the fertilizer and not burn the roots it should be thoroughly mixed with the soil. If stable manure is used at all it should not come in contact with the tubers, as it is sure to make the crop rough and scabby.

These Potatoes were raised from our Northern Grown Seed
40 Potatoes weighed 62 lbs.

POTATOES

The Potatoes marked(*)were grown especially for seed, in Maine, **No Paris Green** was used, no blight, scab or rot appeared, the potatoes growing to full development. Bug Death being used as an insecticide.

Use the "Quinnipiac or Mapes Fertilizers."—To insure quantity and quality in your potato crop there are positively no better fertilizers made.

LAWN GRASS SEED

OUR LAWN GRASS SEED is a specially reliable mixture of fine growing grasses, entirely free from weed seeds and can be depended on to produce a perfect, velvety green turf if properly sown and cared for. Quantity required per acre, 4 bushels. Price per quart 15c, peck \$1.00, bushel \$4.00.

POINTS WORTH REMEMBERING IN MAKING A LAWN.

At least six inches of the surface soil should be alike and even, for nothing looks worse than to see a lawn grown in patches. So many noxious weeds are introduced into the ground with barnyard manure that its use is not recommended. The ground should be well prepared and rolled previous to sowing, it should then be gone over with a fine rake, the seed then evenly scattered over the surface at the rate of four bushels per acre. The whole should then be raked or bushed in and again rolled. When the grass has attained a height of three inches it should be cut with a sharp scythe; never use a lawn mower that "pinches off" or "pulls" the grass, it should "clip" it with a good shear cut. Frequent mowings and rollings are necessary to keep a lawn in good condition. Once or twice during the season an application of Mapes or Quinnipiac should be applied as a top dressing. To "thicken up" the grass use one bushel lawn seed per acre. Don't forget the roller. Use a good Lawn Mower, in good cutting order.

REPAIRING LAWN MOWERS

We repair and sharpen Lawn Mowers of all kinds, putting them in first-class working order. Should any be sent to us that are too nearly worn out to repair we will so advise.

There is less liability of getting churns too large than too small. Be sure and order churns large enough. There must be room in the churn to produce the concussion, and a small churn filled too full will require a longer time for churning.

The above is cut of 2 point Barb-Wire. This is the style of barb-wire now in general use. In figuring estimate about 15 ft. to lb.

PLAIN 2-PLY FENCE WIRE.—This is safer than the barb wire for horse pasture, it also makes a neat lawn fencing. If the end posts are firmly set so that they do not give, it will **never sag**. We are always in a position to name you **Low Prices** on first-class steel fence wire. The price per lb. on each of the above wires will be the same.

GASOLINE ENGINES

(The Fairbanks-Morse)

There are no better gasoline engines on the market than the "Fairbanks-Morse." They are well made, not complicated, parts are interchangeable, give full rated power, start easily and are thoroughly up-to-date.

The "Jack of all Trades" engine comes mounted on wood base as shown, ready for use in the following sizes: 2, 3, 4 and 6-horse power (actual).

The Standard Vertical on iron base, as shown, comes with pulley, batteries, gasoline supply tank, cooling tank, exhaust pot and all short connections in the following sizes: 2, 3, 4, 6, 9 and 12 actual horse power.

The Vertical Portable is furnished in 2, 3, 4, 6, 9 and 12 actual horse power. (The 2-horse is furnished with hand truck, other sizes with shafts or tongue.)

The Special Electric Engine belted to dynamo, for lighting and heating, in sizes from 2-horse power up. If you need power we would like to talk with you.

Above all do not buy a cheap gasoline engine, you borrow trouble if you do.

FAIRBANKS-MORSE
Vertical Engine on Iron Base

WOOD FRAME SAWING MACHINE

Made of Hard Wood, will accommodate saws from 20 in. to 30 in. in diameter. Balance wheel weighs 95 lbs. The frame can be fitted with pole extension if specially ordered, at extra cost. We recommend using 4 in. 4 ply rubber belting, 10 foot centers, 22 feet belt.

SILOS

Round Silos are fast taking the place of the former styles. We furnish these in sizes holding from 30 tons to 270 tons of ensilage. They are made in Canada spruce, Norway Pine, White Pine and Red Cypress—and we have these made up in the Weedsport Improved Open Door Front and the Weedsport Hinged Door Silo. We want to figure with you on a Silo. Write or see us.

OHIO ENSILAGE CUTTER

One of the strongest and most powerful cutters made, furnished with or without traveling feed table. The Traveling Feed Table is a very valuable improvement in Ensilage Cutters, the fodder being carried steadily and regularly to the knives, saving much manual labor.

The Climax Ensilage Cutter and Blower

The great objection to a **Blower** has been the great amount of power required to successfully operate it. This has been overcome in the **Climax** combined machine. It is a wonder in this respect. Write or see us for descriptive circular and special prices.

Wind Mills

Wind Mills are used extensively for developing power for Pumping, Cutting Ensilage and Fodder, Sawing Wood, Grinding Grain, etc., and are very economical, as practically the only cost is the first cost. If in need of such a power write us.

Quinnipiac Fertilizers THE GREAT CROP PRODUCERS

AVAILABLE PLANT FOOD.—Is what the farmer is looking for when he buys commercial fertilizers.

That is just why the **QUINNIPIAC GOODS** stand so well.

They contain this plant food in the available form and in the right proportions to secure good results.

PRINCIPAL BRANDS.

QUINNIPIAC MARKET GARDEN MANURE.—Special attention is called to this brand as being as well formulated and as well balanced as any fertilizer on the market up to date. Per 100 lb. bag, \$2.20. Per ton, \$42.50.

QUINNIPIAC PHOSPHATE.—A standard fertilizer for general use on all crops. Its record for uniformity of grade and mechanical condition is remarkable. It is always reliable. Per 50 lb. bag, \$1.00. Per 100 lb. bag, \$1.95. Per ton, \$37.00.

QUINNIPIAC POTATO MANURE.—Formulated and balanced the same as Market Garden Manure, but not quite so high grade. As a potato grower it has won and maintained a high standing and an enviable reputation. Per 100 lb. bag, \$1.95. Per ton, \$37.00.

QUINNIPIAC GRASS FERTILIZER.—For spring use as a top dressing for lawns, meadows and pastures. It acts quickly and produces a luxuriant growth of grass. It pays to use it. Per 50 lb. bag, \$1.25. Per 100 lb. bag, \$2.35. Per ton, \$44.00.

QUINNIPIAC PURE BONE MEAL.—Made from absolutely pure bones, finely ground and in the best mechanical condition. Per 100 lb. bag, \$2.25. Per ton, \$42.00.

QUINNIPIAC CLIMAX PHOSPHATE.—A well balanced fertilizer, but lower grade than Quinnipiac Phosphate. Per 100 lb. bag, \$1.70. Per ton, \$32.00.

We can supply Quinnipiac Fertilizers in grades that are lower in price—that will compare favorably in quality with other makes costing the same money.

If you have never used Quinnipiac Fertilizers, we would like to have you give them a trial. Our name is a guarantee of the best in quality and price.
